

# Construction

## L2 Structures for Construction

We take care of everything, so you can focus on your project! Our full-service team sources tent materials, completes and submits permits for install and removal, and handles any maintenance needed while the tent is being used. The L2 Pro, Pro+, and TITAN Series tent structures provide climate-controlled breakrooms, extra space for storing materials, protection of equipment from harsh weather conditions, and nearly any other use you need. We know construction projects can be complicated; therefore, it is our goal is to make renting or purchasing a tent space the easiest part.

---

## Uses & Benefits

Storage / Warehousing

Keep materials on the construction site for quick access when they are needed.

Lunch Tents / Break Rooms

Create a climate controlled breakroom tent for up to 1,000 people, complete with a full suite of accessories

Fabrication / Manufacturing

Use flexible tent sizes for additional pre-production or manufacturing space.

All-Weather Foundation Protection

Protect concrete or foundation projects from harsh weather conditions.

## Tent Selections

## SUCCESSFUL CONSTRUCTION PROJECTS

---

### **Battery Plant Storage & Breakroom**

L2 partnered with United Rentals to build several L2 tent structures for both storage and warehousing, as well as providing a breakroom space for battery plant employees. The hardwalls and the garage door on the L2 Pro + Series created a safe and weather-tight environment for the contractor to store their materials

### **Additional Manufacturing Space**

Madison Square Garden Entertainment used an L2 Pro Series tent structure as a pre-fabrication facility for welding and light manufacturing. The increased tent height of 17-foot legs allowed for easy access to the large pre-assembly components. This tent was climate-controlled and kept all materials dry and shielded from harsh weather.

### **Climate-Controlled Breakroom**

Turner Honda utilized an L2 Pro + Series to hold their daily meetings and have a breakroom space for their employees. Hardwalls were used to offer better wind resistance and insulation for climate-control. The L2 installation crew was OSHA certified and trained in safety protocols, creating a safe work environment.

### **Quick Install Breakroom**

Austin Industrial used an L2 Pro Series tent as an employee breakroom for their multi-year construction project. The L2 team worked quickly to successfully install their tent in 3 days with only 1 week notice
