

Environize Disinfectant

Environize Anolyte is an all-natural antibacterial/antimicrobial solution that effectively controls a broad spectrum of harmful pathogens. The solution is environmentally friendly, kills greater than 99.99% of bacteria, viruses, germs and more harmful pathogens, and is a clinically proven technology 100 times more effective than cleaning with bleach.

What is Environize Anolyte?

- An antimicrobial solution formed from naturally occurring elements
- Attacks an array of microbial bacterial pathogens
- Environmentally conscious solution which controls a broad spectrum of harmful pathogens and difficult to kill biofilms
- A powerful antimicrobial solution that is both biodegradable and non-accumulative. The key active ingredient, hypochlorous acid, is a naturally occurring molecule synthesized from an electrolyzed solution of salt and water
- A concentrated electro-chemically activated solution rich in oxygen, in which pathogens such as bacteria and viruses cannot survive
- Safe around food contact surfaces

Environize Anolyte Features

- Does not require any pre-mixing
- Up to 100 times more effective than bleach
- Safe for all clothing
- Safe for all surfaces - Safe removes Biofilms left behind by other disinfectants
- Does not dry skin
- Kills 99.9% of bacteria
- Mild clinical odour
- Safe around food contact surfaces
- Environmentally conscious
- All natural ingredients
- Biodegradable
- Green Technology
