OUTSIDE MOUNT SHADE
MEASUREMENT GUIDE

How to measure for Outside Mount Shades

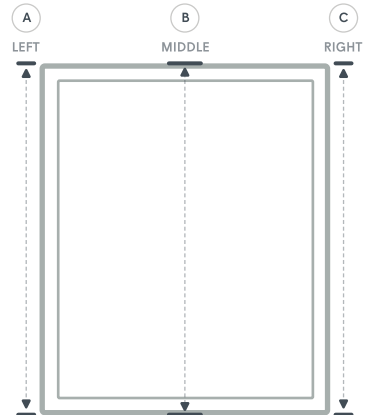

1. Rounding up to the nearest 1/8 of an inch, measure the outside edges of the window frame width in 3 places.

To ensure your window will be fully covered, we recommend adding about 2 inches total to the widths you measure. After accounting for your desired additional width, record the total measurements.

2. Rounding up to the nearest 1/8 of an inch, measure the outside edges of the window frame length in 3 places.

To ensure your window will be fully covered once mounted on the wall, we recommend adding 5 inches to the total height of your shade. After accounting for your desired additional mounting height, record the total measurements.

DESIGNER RECOMMENDED MOUNTING HEIGHT BY MOUNTING LOCATION:

If mounting on wall above window*:

5" above window trim recommended

If mounting on a door:

2" above window recommended

If mounting on window trim:

0" of additional mounting height are required but 2" of mounting surface will be needed on the trim itself.

*Please note: If you select Shade Operation Front and are mounting on drywall above the window, your window trim's depth should be as minimal as possible. When Shade Operation front is selected, the shade falls off the back of the headrail making it flush with the mounting surface. Significantly deep window trim will push the shade forward and could compromise the shade's functionality.
