2024 Telos Block Producer MONITORING

Prepared for :
Telos Block Producer

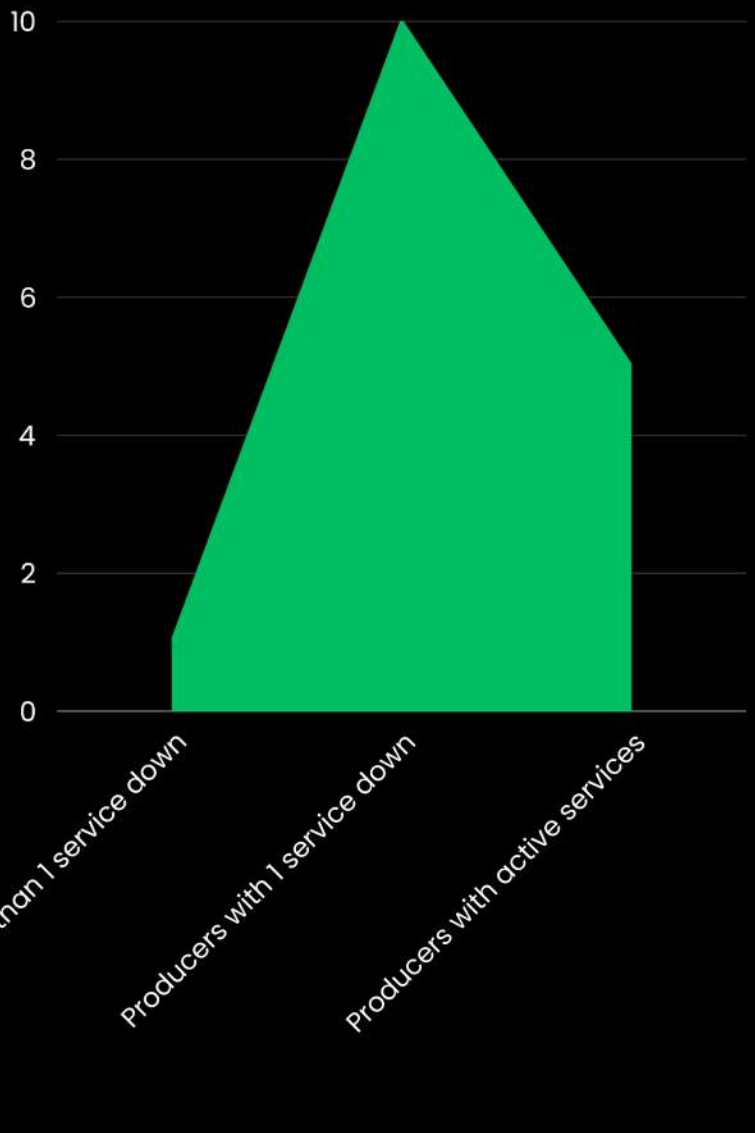

Prepared by :
Daniel Marcelo

MONTHLY ACHIEVEMENTS

In **February 2024**, **Telos** block producers have experienced some price and ranking changes. Although we have seen an increase in the price of the token, it is crucial that we maintain our commitment to the security and quality of the network. **Telos** is going through a transition stage, and we must focus and work even harder to ensure its success.

NOTICE

During this period, several initiatives have been presented to strengthen the network:

1. **TEDP4:** The TEDP4 Proposal has been approved and is now underway. This plan aims to position Telos as one of the leading blockchains in the cryptocurrency space. Telos Zero is the next stage of advancement in scalability and interoperability. It focuses on two pillars of growth: user adoption and infinite scalability. In addition, changes to the token economy, improvements in governance, and a more transparent organizational structure have been proposed.

2. **Roadmap 2024/25:** At the Telos Evolved Town Hall O2, an ambitious roadmap for Telos was presented for the coming years. This includes improvements in transaction handling capacity, updates to the Telos Ethereum Virtual Machine (TEVM), introduction of the blockchain service as a service (BaaS) and a special focus on the gaming sector with the launch of a blockchain ZKEVM side.

3. **System Improvements:** The development team has worked on substantial improvements to system contracts, including new operations and performance optimization. These improvements will strengthen Telos blockchain infrastructure, laying a solid foundation for future innovations.

4. **Tekika:** An interactive NFT collection called Tekika, designed to reward users as they interact with the Telos network, has also been unveiled.

In summary, although we face challenges during this transition, we are committed to the continued success of Telos and its growth as a leading blockchain in the crypto space.

BPS OUT OF NETWORK

Find the multisignatures described here in the telegram multisignature channel

MONITORED DAILY

Monitored every day automatically and manually

WARNING

We give a 5 day notice, if the block producer does not fix the problem, we create a kick MSIG

SERVICES DOWN

Does not apply

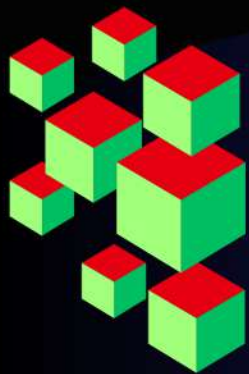

OFF TESTNET

Theteloscope It has been kept off the testnet for almost the entire month of February.

For block producers

Hello block producers, we are discovering that the BP.json files used to access your resources are out of date. In most cases, it is not the bp.json itself, but the URL pointing to the bp.json. There is also another file that may be wrong, called chains.json, when accessed via the scripts designed to extract it, some reports return empty. We are doing the checks following this standard:

<https://github.com/eosrio/bp-info-standard>

Regards,

Daniel marcelo

**Monitoring of block
producers**
Systems Engineer

Project Summary

To: Block producers

Start date: November 1, 2022

Address: Venezuela

All companies widely use monthly / annual reports to document projects, transaction flow, team performance, so for this important reason we carried out this project which we have been working on for 17 months to carry out this monthly report. Starting the first month as a pilot project, with few verifications such as (block producers outside the testnet, number of blocks lost and CPU performance) The second month was training for the verification and control of new processes carried out by each block producer. Realizing that there was still a lot to verify. so we start a new phase

this last month, we achieved the automation of almost 80% of the additional services. .

Using scripts created in python, running on a linux server. and stored in a database, all this data is collected and verified separately. then the next step is to make the graphs and averages of the behavior of each block producer per month, which are reflected in a final report

All this work is done with the as carefully as possible and We want to do the Telos The blockchain network works better every day. We collect information through our latest automation and also by checking networks manually every day.

Regards.

Systems Engineer
