TELOS BLOCK PRODUCER

Prepared By:

Daniel Marcelo

Transparency and sustainability are critical pillars for any organization seeking long-term success. By providing detailed information and conducting thorough analysis, Telos can demonstrate its dedication to these values.

t.me/TelosBPMonitoring

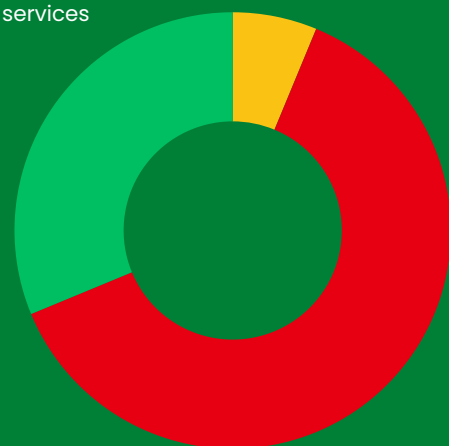

MONTHLY ACHIEVEMENTS

Telos is a blockchain noted for its speed and efficiency, known as the fastest EVM (Ethereum Virtual Machine) in the world. With a capacity to process 15,200 transactions per second and a block creation time of just 0.5 seconds, Telos establishes itself as a leading network for speed and stability. Additionally, it is one of the most energy-efficient blockchains, consuming 99% less energy than other major networks and meeting ESG standards for a greener world.

In April, Telos achieved significant milestones, including the announcement of a partnership to develop a hardware-accelerated zkEVM Layer 2 Ethereum network, aiming to boost Ethereum's scalability. The month also saw Telos integrating with prominent platforms like Tokeny, zkEra Finance, KGeN, Kuma, DIA, and USDV, expanding its capabilities in tokenization, trading, gaming, and stablecoin integration. Telos actively participated in major crypto events worldwide, such as TOKEN2049 and the Hong Kong Web3 Festival, showcasing its innovations and engaging with the blockchain community. These efforts reflect Telos' commitment to advancing blockchain technology and fostering collaboration across the ecosystem.

Producers with more than 1 service down 6.3%

Producers with active services 31.3%

Producers with 1 service down 62.5%

NOTICE

The Telos blockchain stands out for being one of the fastest in the EVM (Ethereum Virtual Machine) space, with a capacity to process 15,200 transactions per second and extremely low gas fees, generally less than \$0.001. This makes it an attractive option for those interested in participating in the cryptocurrency ecosystem without incurring prohibitive expenses. Additionally, Telos has implemented a flat-rate gas rate system, eliminating the possibility of transactions being preempted by users offering to pay more, ensuring a fairer and more inclusive experience. With more than five years of continuous operation, Telos has not experienced any unplanned outages, which speaks to its stability and reliability. Recently, with the approval of the TEDP4 proposal, Telos has transitioned to a Layer 0 solution, enabling seamless interoperability through Web3 and positioning Telos as an energy-efficient and fully ESG-compliant network. In Latin America, Telos is expanding its presence, with a focus on hosting events, building communities, and hosting hackathons to attract developers and foster innovation.

PERFORMANCE

CPU

It is checked if the performance of the CPU is less than or greater than 500 microseconds, and a graph of the monthly speed of each Bp is kept.

CPU PERFORMANCE SUMMARY

Visualize the CPU performance of each block producer

For block producers

Hello block producers, we are discovering that the BP.json files used to access your resources are out of date. In most cases, it is not the bp.json itself, but the URL pointing to the bp.json. There is also another file that may be wrong, called chains.json, when accessed via the scripts designed to extract it, some reports return empty. We are doing the checks following this standard:

<https://github.com/eosrio/bp-info-standard>

Regards,

Daniel marcelo

**Monitoring of block
producers**
Systems Engineer

Project Summary

To: Block producers

Start date: November 1, 2022

Address: Venezuela

All companies widely use monthly / annual reports to document projects, transaction flow, team performance, so for this important reason we carried out this project which we have been working on for 19 months to carry out this monthly report. Starting the first month as a pilot project, with few verifications such as (block producers outside the testnet, number of blocks lost and CPU performance) The second month was training for the verification and control of new processes carried out by each block producer. Realizing that there was still a lot to verify. so we start a new phase

this last month, we achieved the automation of almost 80% of the additional services. .

Using scripts created in python, running on a linux server. and stored in a database, all this data is collected and verified separately. then the next step is to make the graphs and averages of the behavior of each block producer per month, which are reflected in a final report

All this work is done with the as carefully as possible and We want to do the Telos The blockchain network works better every day. We collect information through our latest automation and also by checking networks manually every day.

Regards.

Systems Engineer
