

2024

**BLOCK**

**PRODUCER**

**FINAL REPORT FOR  
THE MONTH OF MAY**

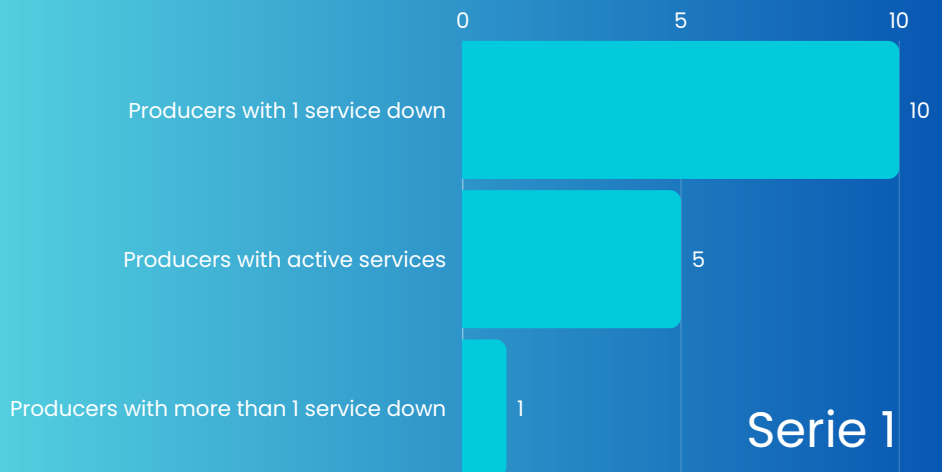

**PERFORMED BY:  
Daniel Marcelo**

Venezuela  
[www.telos.net](http://www.telos.net)

# MONTHLY ACHIEVEMENTS

The Telos network has seen significant progress in the first quarter of 2024, marking important strategic milestones for its development and expansion. With the addition of John Lilic as CEO, Telos has strengthened its leadership and vision to become a global layer 0 network, leveraging the advanced capabilities of Zero Knowledge (ZK) technology. Additionally, the publication of the SNARKtor whitepaper, in collaboration with IOHK, has revolutionized the verification of SNARKs, representing a step forward in blockchain adoption and innovation for developers.

The upgrade to Telos EVM 1.5 has been another notable achievement, focused on network scalability, developer tools and performance improvements, paving the way for EVM 2.0. This release includes debugging improvements, an expansion of the Solidity instruction set, performance improvements, and more efficient feature management. Telos' presence in Latin America has also strengthened in Venezuela, underscoring Telos' commitment to expansion and growth in the region.

# NOTICE

In terms of technical development, the Telos team has continued to improve core elements and the EVM, with updates including initial fixes and improvements to [app.telos.net](https://app.telos.net), and the final review of all arbitrage smart contracts is nearing completion. Merging current EVM transactions with the new version's structures and developing a nodeOS module to interact with EVM 2.0 via a full set of RPC functions are crucial steps towards compatibility with the latest Ethereum developments.

These advancements reflect Telos' continued commitment to innovation and sustainable growth, maintaining its position as a blockchain noted for its speed and scalability without sacrificing network security. With these developments, Telos remains at the forefront, supporting the growth of the crypto industry and transforming the adoption of blockchain technology in Latin America.

# BPS OUT OF NETWORK

Find the multisignatures described here in the telegram multisignature channel

## MONITORED DAILY

Monitored every day automatically and manually

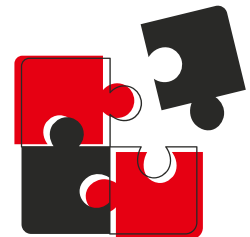

## WARNING

We give a 5 day notice, if the block producer does not fix the problem, we create a kick MSIG

## SERVICES DOWN

Does not apply

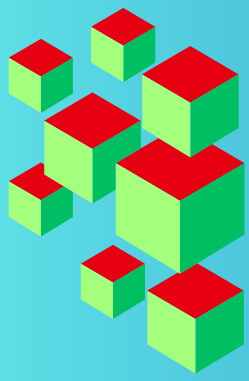

## OFF TESTNET

# PERFORMANCE

## CPU

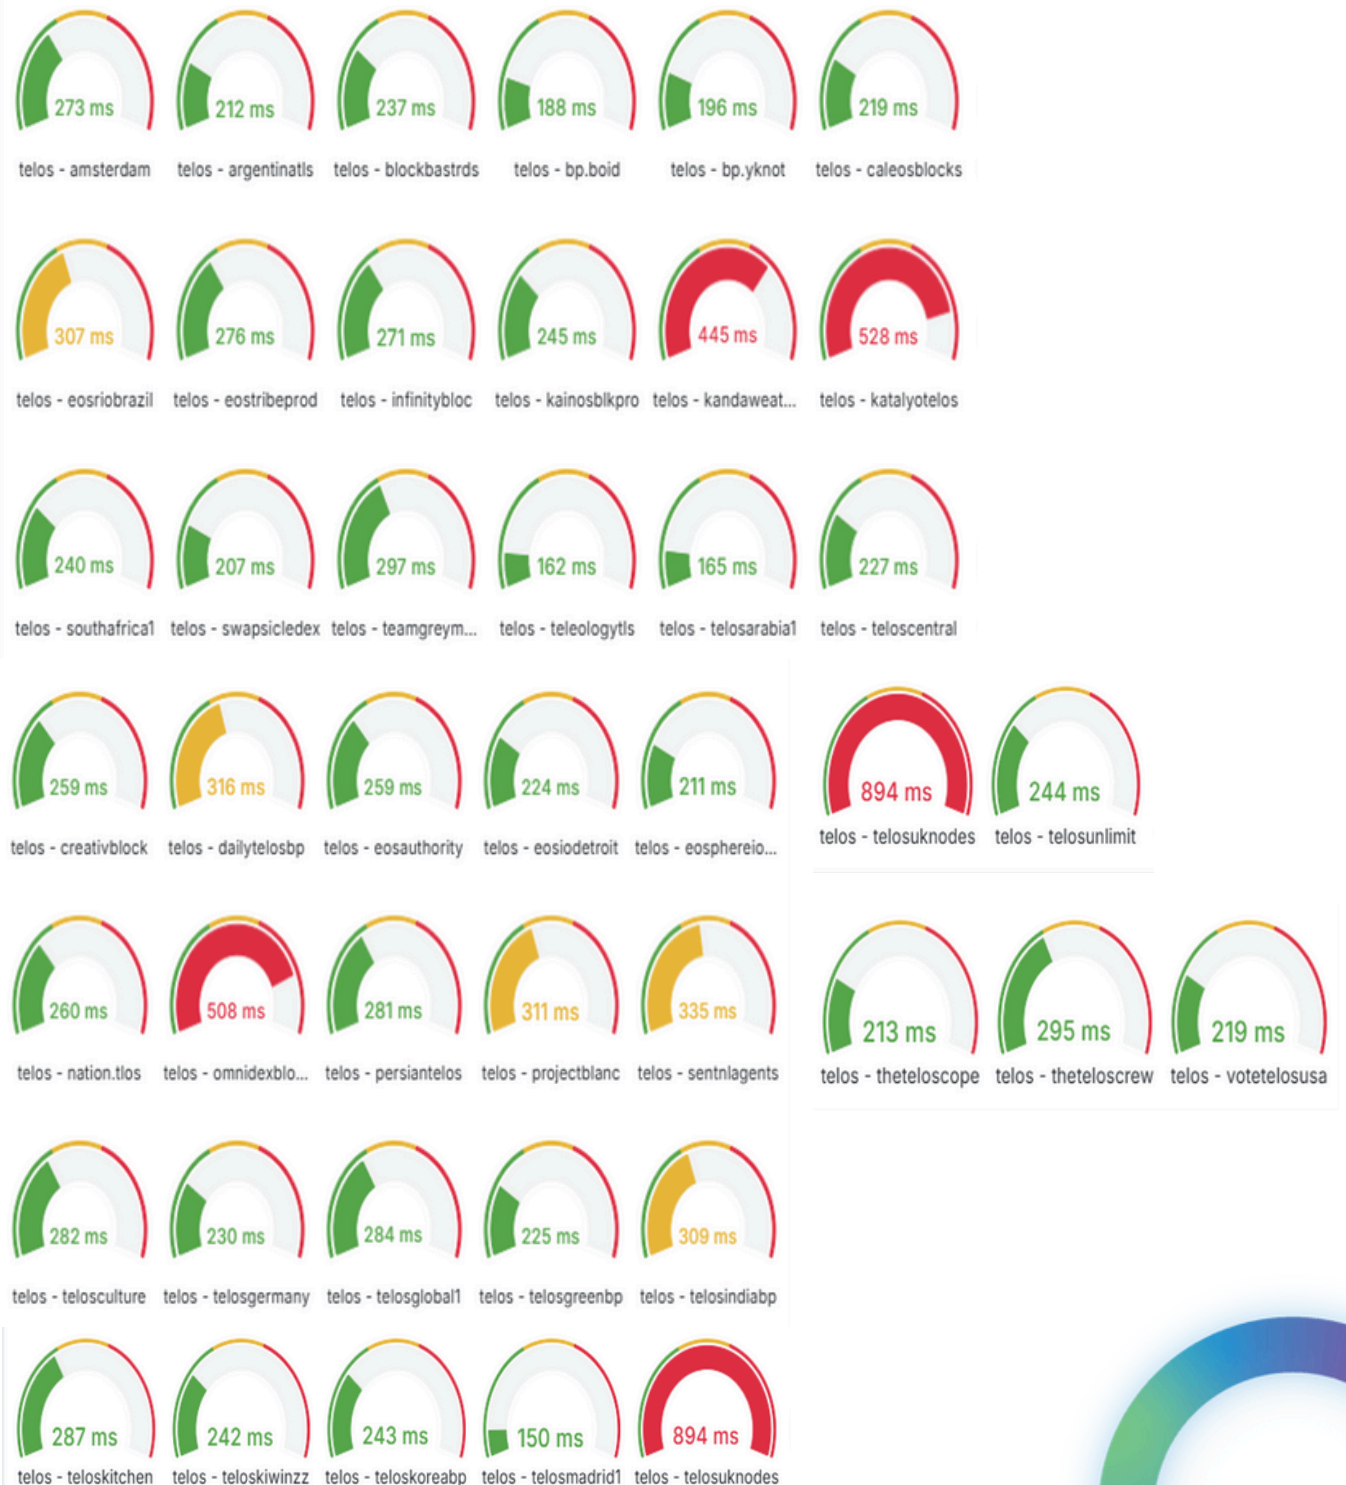

It is checked if the performance of the CPU is less than or greater than 500 microseconds, and a graph of the monthly speed of each Bp is kept.

# CPU PERFORMANCE SUMMARY

Visualize the CPU performance of each block producer

## Average CPU

## For block producers

Hello block producers, we are discovering that the BP.json files used to access your resources are out of date. In most cases, it is not the bp.json itself, but the URL pointing to the bp.json. There is also another file that may be wrong, called chains.json, when accessed via the scripts designed to extract it, some reports return empty. We are doing the checks following this standard:

**<https://github.com/eosrio/bp-info-standard>**

Regards,

*Daniel marcelo*

**Monitoring of block  
producers**  
**Systems Engineer**

# Project Summary

**To: Block producers**

**Start date: November 1, 2022**

**Address: Venezuela**

All companies widely use monthly / annual reports to document projects, transaction flow, team performance, so for this important reason we carried out this project which we have been working on for 20 months to carry out this monthly report. Starting the first month as a pilot project, with few verifications such as (block producers outside the testnet, number of blocks lost and CPU performance) The second month was training for the verification and control of new processes carried out by each block producer. Realizing that there was still a lot to verify. so we start a new phase

this last month, we achieved the automation of almost 80% of the additional services. .

Using scripts created in python, running on a linux server. and stored in a database, all this data is collected and verified separately. then the next step is to make the graphs and averages of the behavior of each block producer per month, which are reflected in a final report

All this work is done with the as carefully as possible and We want to do the Telos The blockchain network works better every day. We collect information through our latest automation and also by checking networks manually every day.

**Regards.**
