Qubit advances its presence in Australia through a partnership with Immersve, a prominent decentralized payment platform

Qubit, an insurtech frontrunner specializing in digital asset insurance, is excited to announce its partnership with Immersve, a prominent Web3 payment platform. This collaboration underscores Qubit's commitment to expanding its footprint in Australia, a crucial market for the growth of the digital asset and blockchain ecosystem. As part of this partnership, Qubit will provide comprehensive insurance coverage to Immersve, to support its growth within the dynamic digital asset space.

Immersve, a principal member of the Mastercard® network, provides an issuing-as-a-service platform that seamlessly integrates both centralized and decentralized payment experiences. With Immersve's APIs and smart contracts, exchanges and decentralized applications (dApps), including Web3 wallets and DeFi protocols, can transact effortlessly wherever Mastercard® is accepted.

"We are delighted to join forces with Immersve, a company that is redefining the possibilities in Web3 payments," stated Helen Ye, CEO of Qubit. "By offering vital risk management tools like insurance, we aim to empower innovative partners such as Immersve. Together, we can contribute to the development of a robust digital asset ecosystem throughout Australia."

Jerome Faury, CEO of Immersve, echoed this sentiment, saying, "Our partnership with Qubit highlights our dedication to delivering a secure and dependable payment experience for our users. Collaborating with a trusted provider of digital asset insurance underscores our commitment to maintaining a strong, secure platform, building trust and confidence within our community."

This partnership not only emphasizes Qubit's dedication to supporting pioneering companies in the Web3 space but also signals a shared vision of fostering trust and innovation in the future of digital assets. Together, Qubit and Immersve are poised to make a meaningful impact in Australia's evolving payment landscape.
