CONTACT

ArkChain merges the excitement of gaming with the power of blockchain to protect wildlife. Dive into a world where each game move contributes directly to conservation efforts, using our cryptocurrency, \$ARKC, to foster real-world impact.

ArkChain: where technology meets tradition in the battle to save endangered species.

ArkChain is more than just a project; it's a growing community of tech enthusiasts and environmental advocates coming together to make a difference. We are developers, conservationists, and blockchain advocates united by a shared vision of a better planet.

OUR MISSION

Empowering global wildlife conservation through blockchain gaming and group action.

Utilize the immersive power of blockchain-driven gaming to inspire and mobilize a global community towards protecting wildlife, turning every game interaction into real-world conservation impact.

The Problem

100x

**Accelerated Rate of
Species Extinction**

Human activities have accelerated the rate of species extinction to a level 100 to 1,000 times higher than natural expectations, signaling a crisis for global biodiversity.

96%

Of Mammals are Livestock

The drastic reduction in wildlife populations not only threatens iconic species but also the ecosystems that are crucial for human survival.

For instance, since the 1980s, river dolphin populations have declined by 73% due to human-induced pressures such as unsustainable fishing and pollution.

69%

**Decline Global Wildlife
Population since 1970**

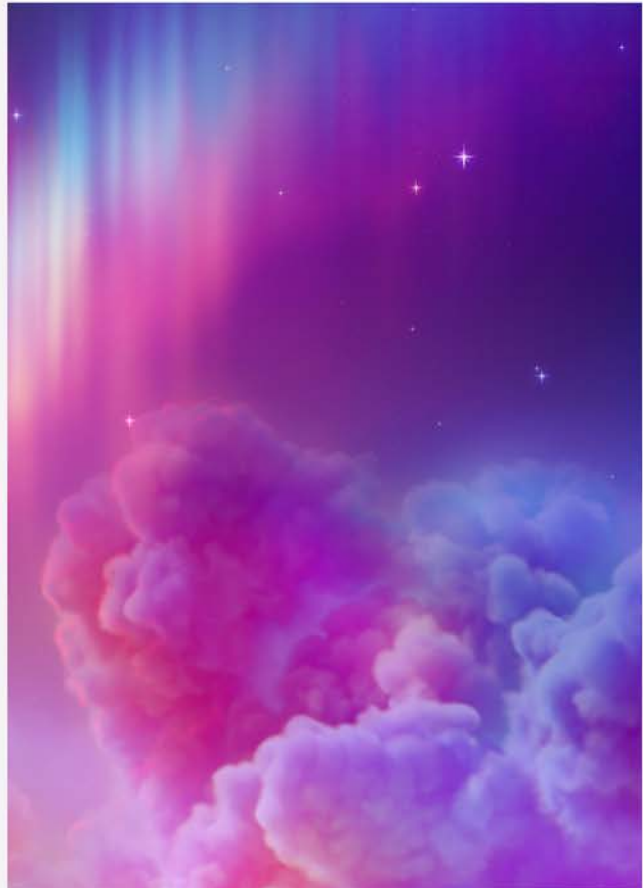

Moreover, wild mammals now represent only a small fraction of mammal biomass globally, underscoring the overwhelming impact of human expansion and livestock production on wildlife.

Our Formula

Imagine a world where every gamer is also a guardian of nature.

As players engage with ArkChain, each action in the game - from trading digital assets to completing conservation missions - generates small transactions using \$ARKC, the game's cryptocurrency.

Unlike typical gaming transactions, these aren't merely for upgrades or to achieve a high score. Instead, each transaction feeds into a dedicated fund aimed at real-world wildlife conservation efforts.

\$ARKC

Creation of ArkCoin for
In-Game Purposes

92.5%

Supply Locked in LP and
Smart Contracts

Formula Steps

ArkChain's development involves three key initiatives: token creation on the Solana blockchain, launching a diverse NFT collection, and creating a hybrid game playable on both cards and in augmented reality (AR).

This multifaceted approach not only enhances the gaming experience by offering both physical and digital gameplay options but also integrates blockchain technology for secure transactions and asset verification.

These steps lay the foundation for a gaming platform where each action contributes directly to real-world conservation efforts.

Token Creation

ArkChain token built on Solana, 30% liquidity pool provided, all LP tokens burned.

NFT Collection

Digital assets/NFTs are created on Solana, enhancing security and interoperability.

Game Development

Developing hybrid game: playable both on cards and in augmented reality.

Game Development, Conservation, and Supporting Strategic Growth Initiatives.

ArkChain's tokenomics are built for stability and long-term growth, securing investor trust by locking 30% of funds in a **Raydium** liquidity pool with all LP tokens burned. This approach eliminates the risk of liquidity being withdrawn, stabilizing the token price and preventing market manipulation.

Smart contracts managed via **Streamflow** incorporate a vesting period of up to five years, aligning the interests of contributors and the development team with the platform's ongoing success and integrity.

Formula Timeline

Q1

2024

Launch ArkChain's \$ARKC token on the Solana blockchain.

Q2

2024

Debut initial collection of conservation-focused NFTs for early adopters.

Q3

2024

Implement first major update to hybrid AR and card gaming platform.

Q4

2024

Expand partnerships with global wildlife conservation projects.

Q1

2025

Introduce community governance features for token holders.

Q2

2025

Roll out second series of NFTs with enhanced interactive features.

Q3
2025

Launch educational campaigns on wildlife conservation in the game.

Q4
2025

Evaluate and publicize the impact of funded conservation projects.

Q1
2026

Upgrade blockchain infrastructure to support increased transaction volumes.

Q2
2026

Introduce multiplayer features linking AR and card gameplay.

Q3
2026

Expand into new markets with localized versions of the game.

Q4
2026

Host global online tournament with conservation rewards.

2027 and Beyond

Continue innovation in gaming and conservation, scaling to new heights and new technologies.

TAKE ACTION

Change Starts Today

Let us unite and collaboratively forge a path toward lasting sustainability, ensuring a brighter, healthier future for our planet and the next generations.

Together, our collective actions can create a profound impact that not only preserves but enhances the world we live in.
