Update 1 (05/27/2020 @ 03:50 AM ET): Download links for the Android 10 update are now available for the OnePlus 5 and OnePlus 5T. Scroll to the bottom for more information. The article, as published on May 26, 2020, is preserved below. It appears that the OnePlus software team has been productive during the lockdown, releasing the stable version of OxygenOS 10 for the OnePlus 5 and OnePlus 5T. Both devices are considered 'flagship killers' from 2017. In October of last year, OnePlus promised to bring Android 10 to these devices by Q2 of 2020. The first Open Beta was available just a month ago, followed by the second and third Open Betas. Now, just under a week since the last beta, OnePlus is releasing a stable version of OxygenOS 10. OnePlus 5 and OnePlus 5T forums are available for users to discuss the updates. If you're unfamiliar with the updates, it's likely that you're aware of what's new in Android 10. The update integrates OxygenOS 10, which includes full-screen gestures, a new UI design, and enhanced location permissions for privacy. The changelog for OxygenOS 10 for the OnePlus 5 and OnePlus 5T includes: - System Upgraded to Android 10 - Brand new UI design - Enhanced location permissions for privacy - New customization feature in the Settings allowing you to choose icon shapes to be displayed in the Quick Settings - Game Space: a new feature that allows you to add your favorite games in one place for easier access and a better gaming experience - Message: Now possible to block spam by keywords - Full Screen Gestures: Removed back gesture from the bottom of the screen and added it on the left and right sides If you own a OnePlus 5 or OnePlus 5T and want to install the OxygenOS 10 update, you can sideload the full OTA download link. Update 1 (11/13/2020 @ 09:26 AM ET): Download links for the OnePlus 5T are available. The article, as published on November 11, 2020, is preserved below. After several months of waiting, OnePlus 5 and 5T users finally got the OxygenOS 10 stable update (based on Android 10) earlier this year in May. However, the update was plagued by issues, including poor battery life and a broken Electronic Image Stabilization (EIS). The update was so problematic that OnePlus didn't even list the build for download on its support website to prevent users from upgrading to the broken release. Since then, the company hasn't released any OxygenOS 10 stable updates for the OnePlus 5 and 5T. In September, OnePlus finally acknowledged the issues and revealed that an update was being processed at the highest priority. The company has now started rolling out OxygenOS 10.0.1 for the OnePlus 5, which includes bug fixes for several issues and Android security patches for September 2020. The changelog for OxygenOS 10.0.1 for the OnePlus 5 includes: - Fixed abnormal call recording issue - Fixed de-activated alarm issue when the phone was powered off The latest Android security patch update for devices with GMS package version 2020.08 is now available, bringing several new features and improvements. This update includes Full Screen Gestures, which allows users to access their favorite apps by swiping up from the bottom of the screen (available only on OP5T devices). Additionally, Electronic Image Stabilization has been added to the camera, providing a more stable shooting experience. As with previous OxygenOS updates, this release will be rolled out in a staged manner, initially targeting a small number of devices before expanding to a wider audience once critical bugs have been identified and addressed. Users who own the OnePlus 5 or 5T can download the recovery flashable .zip files from the provided links and install the update manually using the Oxygen Updater app. Note that users are advised to perform a full backup before updating, as this build may cause data loss during the upgrade process. The update brings several system changes, including a new UI design with improved performance and stability. Users can download the necessary package from the OnePlus 5 or 5T sections of the forum and follow the instructions provided to install the update. It's worth noting that users who are currently running OxygenOS 10.0.0 will need to upgrade to OxygenOS 10.0.1 before proceeding with this update, as it contains critical changes for compatibility reasons. The company has announced plans to roll out incremental updates for the OnePlus 5T in the near future. As beta software, this release carries potential risks and is not considered stable by default. Users should proceed with caution and accept these risks before installing the update. ==========The stickied thread has been published before another one, but as you wish, the other thread was created on November 25th, 2017, by Funk Wizard, when the first Open Beta was released. Since then, it has been used for announcing all subsequent Open Beta releases and gathering feedback on them. However, thanks for changing the thread title; I appreciate it! Unfortunately, my thread is irrelevant, needs to be closed. I'm experiencing wifi issues with my OnePlus 5, which randomly drops and reconnects frequently. Has anyone else encountered this problem? This beta ROM can pass safety net with Magisk? The OnePlus 5 and 5T were the company's flagship smartphones in 2017. Although both phones launched with Android 7.1 Nougat, OnePlus has promised to update them in Q2 2020 with OxygenOS 10 based on Android 10. The first Android 10 beta update for the OnePlus 5 and 5T was announced by Manu J., Global Product Operations Manager at OnePlus. The company wants interested users to test this release before rolling out the update to the wider public. Unlike other Open Beta builds, you will receive OTA updates for future OxygenOS stable builds as well as Open Beta builds. However, if you're still on the final Android 9 Pie-based OxygenOS Open Beta, you'll have to perform a data wipe to upgrade to this new Android 10 beta release. The Android 10 Open Beta 1 update includes a new UI design, updated Android 10, and Full Screen Gesture (OP5T Only). Newly added Hidden Bar allows left-right switches of recent apps. Other features introduced in Android 10 and OxygenOS 10 are also available. Download links for the Android 10 Open Beta 1 package can be found on OnePlus' website. Once downloaded, move it to the root directory of your internal storage and follow the instructions to upgrade. If you prefer to wait for the stable update, there's no need to take any action today. The last stable OxygenOS update was released in March 2020, so unless there are some glaring bugs with this Android 10 beta build, we can expect it to go stable next month.
