Augment Code: The AI Platform That Exceeds Hype =====
___ Chintan Shah, VP Engineering I recently had the opportunity to try Augment Code, an AI platform that has genuinely blown my mind. In just five minutes, you'll see what I mean. Security and Privacy Security and privacy are both vital concerns for any organization. This is one of the reasons why we chose Augment Code - it addressed these issues even before I had a chance to ask questions. Suchitra Hari, Director of Engineering, Developer Productivity Augment is orders of magnitude better than Cursor, and any other coding assistant I've ever tried. Its ability to quickly figure out what I'm talking about from zero context inside a very large code base is unmatched. Testing and Results After 14 days of testing @augmentcode, I canceled my @cursor ai subscription and switched to Augment instead for \$30/month. The \$10 difference? Worth it. Expert Endorsements I've used every coding agent in the past year and @augmentcode is #1 codebase indexing/context engine and integrated taskmaster. It brings out the best in the model, macro project understanding + hyper-focused file edits. I've tried other agents from Cursor to Windsurf. and Augment Code is by far the best. Success Stories @augmentcode one shotted the workflow JSON file required for my app's backend. I just imported it into @n8n jo, and boom... That was crazy fast! Saved me hours of work literally. Sanket D. Augment has been very helpful in letting me focus on solving problems instead of writing code that solves them. Developer Testimonials Every feature in Augment feels like it was built by people who actually ship software at scale. Our developers admitted they would personally buy Augment licenses if we didn't provide it for them. Chris Johnson, VP Technology Delivery The more I use @augmentcode for @rails development, the more I'm convinced it's one of few agents that get's Rails. We needed a tool to help engineers work across different repos with different languages seamlessly. Apparently, Cursor goes into an infinite loop if you ask it to implement and run a go benchmark test. Not the case with @augmentcode. stuckinforloop When testing Augment against GitHub Copilot, Augment was the clear winner. Augment has replaced GitHub Copilot as our AI tool of choice because of the deep context it brings to every feature. Eric Schmidt, Founding Partner Augment Code has both the best team and recipe for empowering programmers and their organizations to deliver more and better software. I honestly tell people when they join the team or who haven't been using Augment to use Augment because it will just surface meaningful suggestions. Erica Gucciardo, Staff Software Engineer If you want the best coding experience as well as fair pricing, you have to try Augment Code. They give you a free trial and once you try it, you won't look back. Literally makes you wonder why people are so hyped on Cursor and others. Stephen Dedalus @USSDedalus Augment Code: The Unsung Hero of AI Coding Platforms The coding community has been abuzz about various AI-powered coding tools, but one platform stands out from the rest - Augment Code. While Cursor and Windsurf have gained popularity, many developers swear by Augment's superior capabilities. A key factor contributing to Augment's success is its ability to learn a codebase thoroughly. This context awareness enables it to provide more accurate suggestions, making it an invaluable tool for engineers. Whether you're new to a company or navigating a complex codebase, Augment brings clarity and consistency, facilitating seamless growth. Augment's strengths extend beyond basic coding tasks. It excels in context-aware tasks, providing insightful answers to even the most unknown questions. Its speed is unmatched, with suggestions appearing in under 100 milliseconds, making it feel almost instantaneous to human eyes. Many developers have reported impressive results using Augment Code. For instance, one user saw a significant reduction in code rework and time saved, while another noted that Augment was able to re-architect their codebase and clean up the mess left by other editors. Despite its many advantages, Augment Code remains relatively unknown compared to other AI coding platforms. Its \$30/month price tag may seem steep, but users swear it's worth every penny. With Augment, complex migrations that typically take weeks now take just days for senior engineers. If you haven't tried Augment Code yet, consider giving it a shot. With its Planner/Executor instructions and contextual awareness, it has the potential to revolutionize your coding workflow. Don't be surprised if you find yourself abandoning other tools like Cursor, Windsurf, and Copilot in favor of Augment's unparalleled capabilities.Looking forward to seeing everyone at the meeting tomorrow and discussin our strategies, which has led to a >40% increase in developer productivity across the board. We are strong believers in Augment Code's potential to not only eat the code assistant market, but redefine how software engineering is performed at scale! This is insane - it's the biggest productivity improvement ever. In our due diligence, we found Augment's depth and breadth of AI talent to be greater than that of all the other startups in the space combined. We are excited to share that Augment has raised \$85 million in Series A funding, bringing our total capital raised to \$110 million in just five months. The Series A round was led by Redpoint Ventures, with participation from GVC, Shopify Ventures, Autotech Ventures, and other leading investors in logistics and AI. We plan to use this funding to supercharge Augie, your AI teammate for logistics. Augie already supports over \$35 billion in freight under management (FUM) across dozens of leading shippers and brokerages, transforming how logistics teams operate from order to cash. The logistics industry moves trillions of dollars of goods across supply chains every year, yet much of it still runs on emails, phone calls, and fragmented systems. Operators are buried under manual tasks, margins are razor-thin, and the pressure to do more with less is relentless. At Augment, we believe this is exactly where AI should step in—not as another tool to learn, but as a true teammate you can trust. Something, or someone, who doesn't just assist, but actually takes ownership of the work. Unlike voice bots, RPA tools, or one-trick point solutions, Augie gets the big picture. It understands the full context of a shipment—from order to delivery to cash—and works across teams, systems, and channels to get things done. ===== Business is entering the most dynamic knowledge base, one that adjusts to your business and answers complicated, messy, real-world questions in real time. This means we're training ChatGPT specifically for your needs, customers, operations, and operators. Our next step is full-stack automation for shippers, brokers, and carriers—load building, pricing, tracking, document handling, invoicing, collections, and custom workflows. We also have AI-native infrastructure to support secure, high-speed execution at scale. Our system has short- and long-term memory and reasoning, built specifically for freight and your business. It's multimodal capabilities plug into the entire freight stack, from TMS to financial systems to load boards. This isn't just task automation; it's a new foundation for how logistics work gets done—faster, smarter, and with less overhead. We're building Augie, a team that will support operators like Luis, who power the industry. He works tirelessly, chasing down documents at 5 p.m., scheduling trucks at midnight, and showing up every morning with grit. We want to give him a teammate who's got his back. That's why we're creating Augie. Join us in shaping the future of work in logistics. Check out our careers page and be part of building something new.The movie is a visually stunning film with a futuristic setting that incorporates elements of sci-fi and technology, featuring a cast of characters who are trying to save humanity from an alien threat. The movie's cinematography and set design are augmented by the use of special effects, which add to its overall impressiveness.increase + enlarge or increase; "The recent speech of the president augmented tensions in the Near East" is a bit too literal, let's try rephrasing it as: enhance or strengthen, making something more intense. It can grow or intensify and become larger or bigger. The pressure grew stronger, and the situation became more complicated. Looking forward to seeing everyone at the meeting tomorrow and discussin our strategies, menambah auka akan membuat kita lebih kuat dalam menghadapi tantangan di masa depan. ===== The first contains about twenty-five gallons of water, to which I add a few drops of sulphuric acid, so as to increase its capacity as a conductor of electricity. I then decompose it by means of a powerful Buntzen battery. The vast white headless phantom floats further and further from the ship, and every rod that it so floats, what seem square rods of sharks and cubic rods of fowls, will augment the murderous din. This is called, using the conquered foe to increase one's own strength. Rokoff seized one of the paddles lying in the bottom of the craft, and, with terror wide eyes still glued upon the living death that pursued him, struck out madly in an effort to accelerate the speed of the unwieldy canoe. It is the malicious pleasure of the East Wind to increase the power of your eyesight, in order, perhaps, that you should see better the perfect humiliation, the hopeless character of your captivity. No small number of these whaling seamen belong to the Azores, where the outward bound Nantucket whalers frequently touch to increase their crews from the hardy peasants of those rocky shores. She uttered no sound; and so strong was the voice within her, representing that it was she of all the world who must uphold him in his misery and not increase it, that it quickly raised her, even from that shock. Within three years a census is to be taken, when the number may be increased to one for every thirty thousand inhabitants; and within every successive period of ten years the census is to be renewed, and increases may continue to be made under the above limitation. As the hour of two approached the friends began to arrive and after offering such consolation to the stricken relatives as the proprieties of the occasion required, solemnly seated themselves about the room with an increased consciousness of their importance in the scheme funeral. But it was enhanced and rendered sublime by the mighty Alps, whose white and shining pyramids and domes towered above all, as belonging to another earth, the habitations of another race of beings. In this way the trade increased, and was drawn from remote quarters to Montreal. There were many men among these, and so the fighting strength of the party was increased.
