The Samsung Galaxy A36 5G is a powerful Android phone with plenty of premium features at an affordable price of \$399. ===== Samsung has launched its new budget offerings in most global markets, and these phones mark a significant shift in the company's long-term commitment to software support. Among these options, the Samsung Galaxy A36 5G stands out as the best overall pick. ===== The Galaxy A36 5G features a glass back, lighter design, more peppy SoC, and six years of software updates, making it a great bargain at \$399. Samsung has plenty of other Android phones under or around the \$500 mark, so you can check out the full list below for all our favorites. ===== The Galaxy A36 5G is the 2025 follow-up to the A35 5G and comes with several improvements, including a larger display, Gorilla Glass Victus Plus on the back, a Snapdragon processor, and 45W fast charging.The Samsung Galaxy S24 FE offers a great balance of power and affordability, with a sublime 120Hz Dynamic AMOLED 2X panel and cameras that take excellent photos. The phone's battery life is decent, and it comes with the latest software package and six generations of OS upgrades. The best budget Samsung phones that won't break the bank are often overlooked in favor of more expensive flagships, but they offer great value for money. If you want to own a world-class device without paying a premium price tag, then the Galaxy A36 5G is your best bet. It delivers all the essentials while still being affordable and is guaranteed to get long-term updates. If you're looking for a budget-friendly option with amazing battery life, consider the Galaxy A26 5G. Although it doesn't come with any premium features, it has a similar 5000mAh battery as other devices in its class. On the other hand, if you're willing to spend more money, the Galaxy A56 5G offers better camera capabilities and more advanced hardware. Alternatively, those seeking powerful devices can opt for the Galaxy S24 FE, which comes with seven years of updates and now has lucrative deals available due to its age. Budget-friendly options are available in Samsung's entry-level line, such as the Galaxy A05s, which improves on previous models by enhancing display size and adding IP54 rating. Samsung also produces a range of inexpensive Android phones that provide fantastic value for money. With their range of affordable devices, consumers may find it easy to locate the perfect phone to suit their requirements. In terms of features, Samsung's budget smartphones often include beautiful displays, stylish designs, and adequate camera systems. They can deliver a competitive performance at an affordable price. While budget phones have historically provided good value for money, they occasionally suffer some compromises that detract from the consumer experience. The Samsung Galaxy A25 5G is one of the best cheap Android phones available. It has a large display with excellent performance and can last up to two days on a single charge. The Galaxy S24 FE offers a balance between cost and premium features, making it an attractive option for those looking for a high-end device without breaking the bank.The Samsung Galaxy S24 FE offers a premium design with impressive features like a triple-camera array, long-lasting battery life, and vibrant display, but its slow charging speeds are a letdown. ===== It is clear that the Samsung Galaxy S24 FE has made some compromises to achieve an affordable price point. With a 120Hz AMOLED display and excellent battery life, it's hard not to be impressed by this device. The phone's performance is powered by the Exynos 2400e chip, which provides snappy performance for everyday tasks. The camera also delivers natural-looking photos thanks to Samsung's AI technology. However, one major drawback is the slow charging speeds. This is a significant concern for those who need a quick top-up during the day. Despite this limitation, the Galaxy S24 FE still offers seven years of OS updates, which is impressive considering its affordable price point. Another budget-friendly option to consider is the Samsung Galaxy A15 5G. With a good-looking display, excellent battery life, and decent performance, it's hard not to be impressed by this device. However, the Galaxy A15 also has some limitations, such as slow charging speeds and limited multitasking capabilities. On the other hand, the Samsung Galaxy A35 offers a fair compromise that ticks most boxes. With a large display, beefy battery, and decent camera setup, it's an excellent option for those who don't read reviews or care about specs.The Samsung Galaxy A35 is a mid-range device that offers a large and colorful AMOLED display but comes with some significant drawbacks. ===== The \$400 price tag of the Samsung Galaxy A35 raises questions about whether it's worth the investment. Although its 6.6-inch AMOLED screen looks stunning, the bezels are quite large, which is to be expected from a mid-range device. The display can't be perfect, but fair compromises should be enough for most people. the Samsung Galaxy A25 5G, which will only set you back \$300 (or less) while still providing all the essentials and beyond. ===== A fine balance between price and performance is what you get with the Samsung Galaxy A25 5G, offering an overall good balance of both. It's excellent for consuming content and using various apps, with a decent camera setup and long-lasting battery life. The cheap Android segment is probably the most exciting in tech right now, where it's hard to make a bad flagship, and even mid-range picks are hitting a pretty reliable stride. Samsung seems to be better at finding this balance between price and performance than anyone else. I've had my hands on probably half a dozen cheap Samsung phones per year since I started reviewing in 2021, and with that many reviews under my belt, I think I can say that these are the cheap Samsung phones you should buy. The Galaxy S24 FE is a good option, delivering the right mix of performance, Galaxy AI smarts, camera flexibility, and overall durability while keeping the cost pegged right at \$650. =====The Samsung Galaxy S24 FE is a compelling choice for those looking to stretch their budget, offering a premium experience at an affordable price. By comparing it favorably to the flagship Galaxy S24, this mid-ranger provides similar materials, three flexible cameras, and seven years of Android updates without the hefty top-end price tag. The 6.7-inch Dynamic AMOLED panel is nearly identical to that found on the Galaxy S25 Plus and offers an increased battery capacity. The Samsung Galaxy A26 5G is the best budget phone under \$300, offering a great balance of features and value. With its big AMOLED display, Gorilla Glass Victus Plus protection, and six years of updates, this phone is hard to beat. The Exynos 1380 chipset may not be as powerful as some other options, but it still delivers solid performance for everyday use. Among our top picks for budget-friendly Samsung phones, the Galaxy A16 5G stands out with its surprisingly tough price tag. Simply put, crafting a high-quality device under \$200 is a challenge. Eventually, you have to cut corners on the spec sheet to keep costs low, and there's not much to remove in the first place. Yet, I still believe Samsung has created something impressive with the Galaxy A16 5G. The key to its affordability lies in its software update commitment. Like the rest of the Galaxy A series, the Galaxy A16 is designed for six years of support, extending into the early 2030s. This translates to a per-update cost of around \$30, better than the Galaxy A26's \$50 or the Galaxy S24 FE's \$90 per major patch. While you're paying for more than just software, this is a solid starting point for a cheap phone for kids or older users. The camera hardware on the Galaxy A16 takes a step back due to its limited budget, but the primary sensor still impresses. It uses the same 50MP, 1/2.76-inch sensor as the Galaxy A26, refined over years of use. The 5MP ultrawide and 2MP macro sensors aren't the most flexible, but that's expected given the tight budget. An excellent update promise is enough to let the Galaxy A16 5G exceed its price tag. The perfect fit for the Galaxy A16 5G is as a great phone for kids and less tech-savvy users. Its mix of lower-grade Gorilla Glass and plastic means it's less prone to damage, and repairs won't cost much. Its IP54 rating for water and dust lags behind other options, but it should handle rainy days and occasional beach trips with care. Ryan Haines / Android Authority What to look for in a good cheap Samsung phone Ryan Haines / Android Authority For most people, choosing a cheap Samsung phone should be simple. Set your price limit, then find a Galaxy A or Galaxy FE device that matches. However, you might get more value by considering specific features. Here's what I focus on before recommending a phone: Check the chipset: Samsung's in-house chips have been a mixed bag, usually at the flagship level. It's disappointing to see a less impressive chipset in the international version. However, at budget prices, Exynos is likely, so ensure it's a recent chip. Budget-friendly materials: Samsung excels at building affordable phones. Inspect the Gorilla Glass on the display and back panel, and don't worry too much about the plastic frame—it's durable. Third camera's the charm: Every Samsung device has three rear cameras, now standard. Not all third cameras are equal. Some budget models include dedicated macro sensors, while premium ones add telephoto hardware. For full camera potential, look for the latter, as macro photography can often be handled by an ultrawide lens. Keep the headphone jack: These days, finding a phone with a headphone jack is rare.I'm looking for cheap Samsung phones with headphone jacks because I still use my old wired headphones a lot, however some newer models don't have them. Another reason is that some people want AI-powered features on their next smartphone and want to make sure it has them. But if you're looking for a phone with those features at a lower price, your options are limited. In the past, I think saving money meant buying the cheapest option. Now however, sometimes it's better to spend a bit more because cheaper phones don't get as many updates and therefore won't last as long. This means that if you buy a cheap phone now, you may have to replace it sooner rather than later. If you like having freedom when using your Samsung phone, you might want to look for one that is unlocked so you can use it with any carrier. Although some carriers offer discounts on unlocked phones to make them cheaper, this could also be something you would need to pay extra for. On the other hand, most Samsung Galaxy A phones come with a level of protection against water and dust. Over time I have learned how to find good budget options even when it comes to premium devices and high-end Android tablets. When it comes to budget phones however, there are usually common mistakes that are made.The Samsung phones under 6000 offer a range of features and options for customers looking for affordable devices. Here are some of the best mobiles in this price list, including models from Samsung brands, ===== Some popular Samsung mobiles under 6000 include: Samsung Metro 313: This feature phone boasts a small 2" display and a 1000 mAh battery to keep it going all day. The camera is limited to a single 0.3 MP rear camera, but it's perfect for basic use. Samsung Guru FM Plus: With its 1.5" display and 800 mAh battery, this device packs a punch in terms of functionality. It's a great option for those who want a compact phone with plenty of power. Samsung Galaxy A7: This mid-range mobile features a larger 5.5" screen and is powered by a 2600 mAh battery. The Qualcomm Snapdragon 615 MSM8939 chipset provides smooth performance, while the Android 4.4.4 KitKat operating system ensures compatibility with older devices. ===== Other notable Samsung phones under 6000 include: Samsung Galaxy On7 Pro: This device offers similar specs to the Galaxy A7, making it a great alternative for those looking for a slightly larger screen. Samsung Galaxy M01 Core: With its compact design and 5499mAh battery, this phone is perfect for basic use and is an affordable option in the under 6000 price range. Samsung Galaxy A2 Core: This mobile features a slightly larger screen than some of the other options in the list, making it a great choice for those who want a bit more visibility. =====
