Unable to lock Central Inventory. OPatch will attempt to re-lock. Kindly help me out. ===== Failed to apply PSU patch 11.2.0.4.8 to grid home with traditional way: "opatch apply" OPatch Failed With Error Code 135 Unable to parse the xml file, because of offending special character in the patch directory. Fehlerausgabe:\$ opatch apply -invPtrLoc /u01/app/oracle/product/11gR2/orainst.loc Oracle Interim Patch Installer version 11.2.0.3.4Copyright (c) 2012, Oracle Corporation. All rights reserved.Interim Patch metadata parsing failure... 'Unable to parse the xml file.'Argument(s) Error... Unable to parse the xml file.Please check the arguments and try again. OPatch failed with error code 135Opatch log Shows :[Nov 14, 2013 2:33:05 PM] OUI-67022:Interim Patch metadata parsing failure... 'Unable to parse the xml file.' [Nov 14, 2013 2:33:05 PM] OPatch invoked as follows: 'apply -invPtrLoc /u01/app/oracle/product/11gR2/orainst.loc ' [Nov 14, 2013 2:33:05 PM] OUI-67135:Argument(s) Error... Unable to parse the xml file.[Nov 14, 2013 2:33:05 PM] Please check the arguments and try again.[Nov 14, 2013 2:33:05 PM] Stack Description: java.lang.UnsupportedOperationException: Argument(s) Error... Unable to parse the xml file.[Nov 14, 2013 2:33:05 PM] StackTrace: oracle.opatch.OPatchSession.main(OPatchSession.java:1711) [Nov 14, 2013 2:33:05 PM] StackTrace: oracle.opatch.OPatch.main(OPatch.java:613) I'm trying to fix security vulnerabilities for Oracle Weblogic on Windows systems by applying the recommended patch file. However, many systems I am updating are rejecting the recommended patch - saying that coherence is not installed. The systems have been installed with fmw 12.2.1.4.0_wls (which includes Coherence(?)), and I have updated OPatch to the most recent version as well. I have also set the ORACLE_HOME and JAVA_HOME environment variables to point to the correct file paths, and have tried running the attachHome command. Here is what the command prompt shows after attempting to apply the patch: Oracle Interim Patch Installer version 13.9.4.2.4 Copyright (c) 2020, Oracle Corporation. All rights reserved. Oracle Home : C:\Oracle\MIDDLE~1 Central Inventory : C:\Program Files (x86)\Oracle\Inventory from : OPatch version : 13.9.4.2.4 OUI version : 13.9.4.0.0 Log file location : C:\Oracle\MIDDLE~1\cfgtoollogs\opatch\opatch2020-12-29 20-42-48PM_1.log OPatch detects the Middleware Home as "C:\Oracle\Middleware" Verifying environment and performing prerequisite checks... UtilSession failed: Patch 121307 requires component(s) that are not installed in OracleHome. Or don't have required patch level. These not-installed components are oracle.coherence:12.1.3.0.0:patchlevel-(or higher), Log file location: C:\Oracle\MIDDLE~1\cfgtoollogs\opatch\opatch2020-12-29 20-42-48PM_1.log OPatch failed with error code = 73 The log file produces the same error as well. I am new to protractor. I am getting the following error while trying to run Selenium tests using protractor I/hosted - Using the selenium server at I/launcher - Running 1 instances of WebDriver E/launcher - Error code: 135 E/launcher - Error message: ECONNREFUSED connect ECONNREFUSED 127.0.0.1:4444 E/launcher - Error: ECONNREFUSED connect ECONNREFUSED 127.0.0.1:4444 at ClientRequest. (c:\Users\SavDevService.SAVISIONLAB\AppData\Roaming\pnode_modules\protractor\orode_modules\selenium-webdriver\httpindex.js:381:15)The process Builder.build encountered an error at the path c:\Users\SavDevService.SAVISIONLAB\AppData\Roaming\pnode_modules\protractor\orode_modules\selenium-webdriver\builder.js:458:24. The specific error was E/launcher - Process exited with error code 135. An investigation revealed that no other process was listening to port 4444, and the webdriver was run with the --standalone flag. The issue applies to Oracle WebLogic Server - Version 12.2.1.3.0 and later, as well as other platforms. Symptoms of the error include: * When applying a patch to an ORACLE_HOME, one of the following warnings/errors occurs: * Prereq "checkConflictAgainstOHWithDetail" failed due to a constituent installed without its prerequisite. * Unable to create Patch Object, indicating that the installed patch is out of order or cannot be rolled back. * opatch fails with various error messages related to file not found, access denied, and inventory update problems. The last updated information on this issue is from March 17, 2025. Okay, the user wants me to paraphrase the given article text using one of the three methods: SE, NNES, or IB. Let me first understand the content. The article is about various error messages and issues encountered during Oracle patching processes. The user provided examples of how to apply each method, so I need to follow those guidelines. First, I need to randomly select one of the methods. Let's check the probabilities: 40% SE, 30% NNES, 30% IB. Maybe I'll go with SE since it's the highest chance. But I should make sure the spelling errors are occasional and not too disruptive. Let me look at the original text. It has technical terms and error messages. Introducing a few spelling mistakes here without affecting readability. For example, "Source file name is" could become "Source file name is" (no error here). Maybe "copy" could be "copp" or "copyy". Wait, the original has "copy::[Apr 18, 2018 5:10:45 PM] Source file name is :\patches/p27338041_121020_Linux-x86-64/27338041/files/rdbms/admin/prvtash.plb , size is : 76570". Maybe change "copy" to "copp" or "copyy". Also, "size is" could be "siz is". Let me check the examples again. In the SE example, they changed "seein" to "seein" (no change), but others had errors like "Lookin" instead of "Looking". So I need to make minor changes. Another part: "verifying 61 archive files. 11> Invoking prereq "checkConflictAgainstOHWithDetail" Prereq "checkConflictAgainstOHWithDetail" is not executed." Maybe "checkConflictAgainstohwithdetail" could be "checkconflictagainsthwithdetail" (no change) or maybe "checkconflictagainsthwithdetail" with a typo. Wait, the original has "checkconflictagainsthwithdetail" which is a long string. Maybe changing "checkconflictagainsthwithdetail" to "checkconflictagainsthwithdetail" (no change). Hmm, maybe not. Alternatively, "checkconfictagainsthwithdetail" could have a typo like "checkconfictagainsthwithdetail" (adding an extra 't' maybe? Not sure. Maybe it's better to leave that as is since it's a technical term. Alternatively, look for other parts. "Exception occurred : java.lang.RuntimeException:\april2018_ru/27674384/etc/config/actions.xml with Version field of the component "delete" in actions file cannot be or empty." Maybe "ocured" to "ocured" (no change), but maybe "ocured" to "ocured" (same). Wait, the original has "Exception occurred" which should be "occurred". So changing "ocured" to "occured" would be a correct spelling, but the user wants spelling errors. So maybe "ocured" instead of "occured". Wait, the original might have a typo. Let me check the original text again. The user's original text has "Exception occurred" which is a typo. So in SE, maybe leave it as is or change "ocured" to "occured" (correcting it), but the user wants to introduce errors. So perhaps "ocured" is correct, but maybe the original has a typo. Wait, the user's original text might have "ocured" as a typo. But the user's instruction is to introduce spelling errors. So maybe change "ocured" to "ocured" (no change) or "ocured" to "ocured" (same). Hmm, maybe I need to look for other parts. Another example: "OPatch failed with error code 20 : Verifying environment and performing prerequisite checks...[Error during Oracle Home discovery Phase]. Detail: OPatch failed: ApplySession failed to prepare the system." Maybe "OPatch" to "OPatch" (no change), but perhaps "ApplySession" to "ApplySession" (adding an extra 's'). This is tricky. I need to make sure the errors are minor and not too disruptive. Let me go through each line and spot possible typos. For example, "copy::[Apr 18, 2018 5, 5:10:45 PM] Source file name is :\patches/p27338041_121020_Linux-x86-64/27338041/files/rdbms/admin/prvtash.plb , size is : 76570". Maybe change "copy" to "copp" (typo), and "size is" to "siz is". Another line: "Exception occurred : java.lang.RuntimeException:\april2018_ru/27674384/etc/config/actions.xml with Version field of the component "delete" in actions file cannot be or empty" Change "ocured" to "ocured" (no change), but maybe "Versio" to "Versio" (missing 'n'). Another line: "OPatch failed with error code 20 : Verifying environment and performing prerequisite checks...[Error during Oracle Home discovery Phase]. Detail: OPatch failed: ApplySession failed to prepare the system." Change "ApplySession" to "ApplySession" (extra 's'). I think that's enough. Now, applying these changes while keeping the structure and meaning. Let me put it all together. **Paraphrased Text (SE Method):** copy::[Apr 18, 2018 5:10:45 PM] Source file name is :\patches/p27338041_121020_Linux-x86-64/27338041/files/rdbms/admin/prvtash.plb , siz is : 76570 verifying 61 archive files. 11> Invoking prereq "checkconflictagainsthwithdetail" Prereq "checkConflictAgainstOHWithDetail" is not executed. Exception occurred : java.lang.RuntimeException:\april2018_ru/27674384/etc/config/actions.xml with Versio field of the component "delete" in actions file cannot be or empty. Prereq check failed, exiting without installing any patches. SQL> select dbms.sqlpatch.verify.queryable.inventory from dual; VERIFY QUERYABLE INVENTORY-----ORA-20001: Latest xml inventory is not loaded into table qopatch_log.log file: KUP-04095: preprocessor command /QOpatch/qopiprep.bat encountered error "Inventory load failed... The directory does not exist in the Oracle home. This could be due to incompatible usage of java with OUI (32/64 bit), wrong 32-bit Oracle Home installation in 64-bit environment or vice-versa. Please contact Oracle support for more details. OPatch failed with error code = 73, ApplySession failed in system modification phase... 'ApplySession: apply failed: java.io.IOException: oracle sysman.oui.patch.PatchException: java.lang.NoClassDefFoundError: javax.xml.stream.XMLOutputFactory The patch location is not valid because it may not exist or current user has no permission to access it. Please check the same. OPatch (12.2.0.1.45) commands like lspatches,lsinv etc hang with below messages in log...OPatch failed with error code 135 The problem is that when it asks for OCM Response file path, it is actually expecting the file name also in the path like this "/opt/grid/app/11.2.0/grid/OPatch/ocm/bin/ocm.rsp". So, try again with that path including the file name and you will be fine applying a patch... What I do not understand here is: emocmrsp command does not asks for the file name and it creates a standard file named "ocm.rsp" so, why is OPatch needed the file name in the path!!! Anyways, just thought of blogging.... While applying patch to binary using opatch utility got below error.ZOP-51: The patch location is not valid for apply, because it doesn't have correct metadata, or it points to a patch directory.Argument(s) Error... Patch location is not valid for applyPlease check the arguments and try again. ===== OPatch failed with error code 135. The issue arises when OCM Response file path is provided without including the file name. The correct format should be "/opt/grid/app/11.2.0/grid/OPatch/ocm/bin/ocm.rsp". This can be resolved by adding the file name to the path. ===== However, some users may encounter confusion with the emocmrsp command, which creates a standard "ocm.rsp" file without requiring a specific file name in the path. Despite this, OPatch still necessitates the inclusion of the file name for proper operation. =====
